REMARKS/ARGUMENTS

Claims 15 - 17, 37 - 44, and 46 - 47 are pending. Claims 16, 17, 37, 41, 46, and 47 were amended by the amendment filed October 12, 2006 and claims 37, 41, and 46 are further amended by this supplemental amendment. Support for the amendment can be found at page 12, line 12 to page 13, line 13.

The Examiner is thanked for the personal interview conducted on October 28, 2006 at which the instant amendments were discussed. The Examiner said he would consider these amendments in conjunction with the amendments submitted with the October 12, 2006 response but that the issue would require further consideration before a position could be taken..

At the interview, we also discussed the amendments of October 12, 2006 to the apparatus claims 15 - 17 and 47 and it was agreed that the response adequately addressed the issues set forth under 35 U.S.C. § 112.

Applicant will not repeat the responses made in the amendment of October 12, 2006, which this paper is not intended to supplant but to supplement, and will confine his remarks to the supplemental amendment. As an initial matter, applicant styled the present amendment with respect to the state of the claims prior to the amendment of October 12, 2006 as the amendment of that date has not yet been accepted. However, for convenience of the present discussion, to highlight the new features being referred to, the following how the amendments to claims 37, 41 and 46 would be written had the October 12, 2006 amendment been accepted.

Claim 37 (currently amended) A flexible liner, comprising:

- a) a geotextile fabric lining a surface and having pores; and
- b) a polyurethane composition comprising a fibrous material, ~~sprayed over~~ formed by spraying said fibrous material and reaction components comprising a polyol and an isocyanate together onto said surface-lining geotextile

Appl. No. 09/814,552
Supplemental Amtdt dated November 13, 2006
Supplemental reply to Office Action of May 17, 2006
Att. Docket No.: 7014-101

Filing date: March 22, 2001
Applicant Name: Henry H. Wheeler, Jr. et al.
Examiner: Rabon A. Sergeant
Art Unit: 1711

fabric, filling in the pores and forming a one layer
monolithic membrane with the geotextile fabric.

Claim 41 (currently amended) A process for the preparation
of a flexible liner comprising:

- a) layering a sheet of a geotextile fabric having
pores and a perimeter edge onto an object to be lined; and
- b) providing fibrous material and reaction
components comprising a polyol and an isocyanate; and
b)c) spraying a polyurethane composition
comprising a said fibrous material and said reaction
components together onto said layered sheet of geotextile
fabric[[,]] whereby to form a polyurethane composition
comprising said fibrous material filling in the pores and
forming a one layer monolithic membrane with the layered
geotextile fabric.

Claim 46 (currently amended) The process of claim 41,
further comprising attaching the layered geotextile fabric to
the object with an adhesive, prior to spraying the fibrous
material and reaction components that form the
polyurethane composition, wherein the perimeter edge of
the geotextile fabric is not tacked to the object to allow gas
to escape.

By this amendment, it is a combination of fibrous materials and polyol and
isocyanate reaction components that is sprayed together onto an already layered sheet of
geotextile material. This results, as stated in the claims, in polyurethane comprising the
fibrous material filling in the pores of the geotextile fabric and forming a one layer
monolithic membrane with the geotextile fabric. As such it is completely distinct from
the cited references. As pointed out in the amendment of October 12, 2006, Adam et al.

Appl. No. 09/814,552
Supplemental Amdt dated November 13, 2006
Supplemental reply to Office Action of May 17, 2006
Att. Docket No.: 7014-101

Filing date: March 22, 2001
Applicant Name: Henry H. Wheeler, Jr. et al.
Examiner: Rabon A. Sergeant
Art Unit: 1711

require their liquid mixture to be dispensed onto a continuously moving porous blanket (see the Abstract and column 1 lines 43 - 47). Moreover, neither Adam et al. nor Markusch et al. teach layering a sheet of geotextile fabric onto an object and spraying the polyurethane composition onto the layered sheet of geotextile fabric. See the discussion in the October 12, 2006 as well as there discussion there as to why it is inappropriate to reject the claims further over White.

As noted in the specification, at page 2, lines 11 - 13 and page 3, lines 3 - 5, problems of the prior art when fully reacted polyurethane is applied to a vertical surface include slumping and the inability to conform to complex shapes and surface details. The claimed invention avoids slumping problems and enables the application of reinforced polyurethane to complex vertical surfaces such a geotextile surface.

Applicants believe that the claims are all in condition for allowance and respectively solicit a Notice of Allowance.

The Commissioner is hereby authorized to charge any deficiency in the fees filed, asserted to be filed or which should have been filed herewith (or with any paper hereafter filed in this application by this firm) to our Deposit Account No. 50-3881.

Dated: November 13, 2006

Respectfully submitted,
